CLOUD INVENTORY®

INVENTORY CONTROL THAT DRIVES PERFORMANCE

Know the location, condition and availability of your inventory at all times

The lack of true inventory control is a major source of frustration for supply chain leaders. It is also a significant impediment to better business performance. Cloud Inventory helps organizations like yours gain control and visibility of their inventory, providing real-time data at every touchpoint, anytime, anywhere—whether it's in the warehouse, on a job site, on consignment or in the field.

The Cloud Inventory Platform is an inventory control layer for real-time inventory accuracy, mobile execution, and operational discipline, without the burden of a full WMS rollout. The platform provides unprecedented power to manage inventory and related processes to increase visibility, reduce carrying costs, accelerate inventory turns and improve productivity.

KEY CAPABILITIES

So much depends on having visibility into the exact location, condition and availability of your inventory in real time—from raw material, to work-in-progress, to finished goods, whether in the warehouse, in the field, or on the last mile to the end customer. The Cloud Inventory Platform provides a single point from which to manage inventory, streamline supply chain operations, and gain end-to-end visibility.

- **Warehousing:** Operational and inventory control within the traditional 'four walls' of your warehouse or distribution facility.
- **Field Inventory:** Accurate control and visibility of inventory in the field operating online or disconnected—in a trunk, in a hospital, consignment, or on a jobsite.
- **Manufacturing:** Lean manufacturing and Kanban support for control of inventory issued to the line and returned to stock.
- **Platform:** A cloud-based, single platform for data model, development and application support, operating stand-alone or seamlessly integrated with multiple ERP and other supply chain systems.

CLOUD INVENTORY DELIVERS

Real-time, end-to-end visibility at every touchpoint in the supply chain, from the warehouse to the field

BENEFITS

With Cloud Inventory, organizations have the power to adapt to changes as they happen. Our customers experience benefits such as:

Productivity: Boost productivity at every point in the supply chain from a single robust platform.

Compliance: Easily adhere to industry rules and regulations in the ever-changing digital economy.

Inventory Optimization: Optimize the movement of inventory wherever it resides, both inside and outside the warehouse.

Revenue Generation: Improve your bottom line with solutions that streamline processes and maximize order fulfillment.

WAREHOUSING

Breakthrough inventory control increases accuracy, visibility and productivity throughout your warehouse. Significantly improve planning and execution while achieving end-to-end visibility and control of the state, location and authenticity of your inventory, anywhere, anytime.
